1 Operating instructions

1.1 Using this manual

- Read this operating manual thoroughly before using the device for the first time. Also observe the instructions for use of the accessories.
- This operating manual is part of the product. It must always be kept easily accessible.
- Enclose this operating manual when transferring the device to third parties.
- You will find the current version of the operating manual for all available languages on our website at www.eppendorf.com/manuals.

1.2 Danger symbols and danger levels

1.2.1 Danger symbols

The safety instructions in this manual have the following danger symbols and danger levels:

<table>
<thead>
<tr>
<th>Cuts</th>
<th>Electric shock</th>
</tr>
</thead>
<tbody>
<tr>
<td>⚠️</td>
<td>⚠️</td>
</tr>
<tr>
<td>Hazard point</td>
<td>Material damage</td>
</tr>
</tbody>
</table>

1.2.2 Danger levels

| DANGER | Will lead to severe injuries or death. |
| WARNING | May lead to severe injuries or death. |
| CAUTION | May lead to light to moderate injuries. |
| NOTICE | May lead to material damage. |

1.3 Symbols used

</table>
2 Safety

2.1 Intended use

The TransferMan 4r has been designed and manufactured for use in biological, chemical and physical research. It is used for the precise positioning of microcapillaries and similar tools as well as for the transfer of very small sample volumes.

The TransferMan 4r has been designed and manufactured for research use only.

The TransferMan 4r is intended exclusively for indoor use and for operation by qualified staff.

2.2 Warnings for intended use

WARNING! Risk of injury due to flying capillaries and glass splinters.

If exposed to high pressures, capillaries may detach themselves from the grip heads and become projectiles. Capillaries can crack as a result of incorrect handling.

▶ Wear protective goggles.
▶ Never aim capillaries at people.
▶ Use capillaries with an outer diameter that matches the grip head specifications.
▶ Always mount / dismount capillaries when they are depressurized.
▶ Mount the capillary correctly in the grip head.
▶ Do not touch the capillary with the Petri dish or other objects.

CAUTION! Risk of cuts from broken capillaries.

Capillaries are made of glass. They are very sharp and fragile.

▶ Wear your personal protective equipment (PPE).
▶ Always mount capillaries depressurized.
▶ Never aim capillaries at people.
▶ Handle the capillaries very carefully.

NOTICE! Mechanical damage to the motor modules.

Excessive load leads to increment errors or destruction of the drive.

▶ Do not drive the modules against mechanical obstructions.
▶ Do not hold any objects near the modules.
▶ Load the motor module with a maximum of 200 g.
NOTICE! Device malfunction
Do not use mobile phones or other mobile communication equipment during operation.
- Keep at least a distance of 2 meters.

WARNING! Damage to health due to infectious liquids and pathogenic germs.
- When handling infectious liquids and pathogenic germs, observe the national regulations, the biological security level of your laboratory, the safety data sheets, and the manufacturer’s application notes.
- Wear your personal protective equipment.
- Consult the "Laboratory Biosafety Manual" (source: World Health Organization, Laboratory Biosafety Manual, in its respective current valid version).

2.3 Warning signs on the device

<table>
<thead>
<tr>
<th>Warning symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Warns of the risk of injury caused by capillary tips</td>
</tr>
<tr>
<td></td>
<td>Warns of the danger of crushing on the motor module</td>
</tr>
<tr>
<td></td>
<td>Warns of magnetic fields</td>
</tr>
<tr>
<td></td>
<td>Read the operating manual</td>
</tr>
</tbody>
</table>
2.4 User profile

The device and accessories may only be operated by trained and skilled personnel. Before using the device, read the operating manual carefully and familiarize yourself with the device’s mode of operation.

2.5 Information on product liability

In the following cases, the designated protection of the device may be compromised. Liability for any resulting property damage or personal injury is then transferred to the operator:

- The device is not used in accordance with the operating manual.
- The device is used outside of its intended use.
- The device is used with accessories or consumables which are not recommended by Eppendorf.
- The device is maintained or repaired by individuals not authorized by Eppendorf.
- The user makes unauthorized changes to the device.

3.2 Features

The micromanipulator TransferMan 4r has been especially developed for work processes that require intuitive movement of the capillary.

The TransferMan 4r combines the classical benefits of a mechanical system with the benefits of an accurate electrically driven system.

The capillary is controlled by a joystick. The joystick has an inner (proportional) and an outer (dynamic) movement range. In the inner range, the joystick movement is transferred directly to the capillary. In the outer range, a greater forwards or backwards movement of the joystick results in an acceleration of the capillary movement. The movement ranges enable moving to any position in the working range of the micromanipulator.

Proportional movement is suitable for all working techniques that require intuitive, sensitive handling, e.g., intracytoplasmic sperm injection (ICSI) and the transfer of stem cells into blastocysts.

The software control provides predefined applications, freely programmable softkey functions, a freely programmable application and the storage of different positions in all space coordinates.
3.3 Product overview

The motor module is mounted on a special microscope adapter or on a free-standing tripod (magnetic). The control board is mechanically separated from the motor module.

Fig. 3-1: TransferMan 4r – right side mounting

1 Motor module 2 Control board
3.3.1 Motor module

The motor module is made up of three modules. The capillary can be moved in all three spatial axes due to the layout of the modules. The X-module with the capillary can be swung out of the working range using the swivel joint. The injection angle of the capillary can be set to any angle on the angle head.

Fig. 3-2: Motor module – right side mounting

1  Z-module
2  YZ connector
3  Angle head
4  Y-module
5  Swivel joint
6  X-module
3.3.2 Microscope adapter

The motor module is mounted to a microscope adapter. A special microscope adapter is available for each microscope type. The microscope adapters are either mounted horizontally or vertically.

ℹ️ The microscope adapter is not included in the delivery package.

Fig. 3-3: Microscope adapter for horizontal mounting – example: Olympus 1

1 Designation with identification of the microscope type
2 Cable conduit
3 Z-module holder
   For horizontally mounted microscope adapters
Fig. 3-4: Microscope adapter for vertical mounting – example: Nikon 1

1 Designation with identification of the microscope type

2 Z-slider
   For vertically mounted microscope adapters
3.3.3 Control board

The control board contains the keypad, the display and the joystick, and, to the side, the selection dial. The direction of movement and the speed of the joystick are transferred to the capillary. The responsivity of the movement and the size of the working range are predefined in the software setting. On the control panel, the working range can be selected and individually changed using the selection dial.

Fig. 3-5: Control board – front

   - 1.3 mm

3. **Allen key**
   - 1.5 mm, 2 mm, 2.5 mm, 3 mm, 4 mm, 5 mm, 6 mm
3.4 Control panel

With the keys on the control panel you can switch on the control board and select the size of the working range. The softkeys are used to open applications, execute functions, navigate the menu and set parameters.

**Fig. 3-8: Control panel**

1. **coarse key**
   Sets the large working range

2. **fine/x-fine key**
   Sets the medium or small working range

3. **menu key**
   Opens the menu

4. **Softkeys 1 – 5**
   Select an application, trigger a function, navigate or set parameter values

5. **standby key**
   Switches the control board on or off or cancels automatic movements

6. **Display**
   Displays the software

7. **home key**
   Moves the capillary out of the working range to a defined position
3.5 Joystick

The joystick moves the capillary in all three spatial axes. The joystick movement is transferred directly to the capillary in the proportional range. In the dynamic range, the movement of the capillary is accelerated the further the joystick is moved forwards and backwards.

**Fig. 3-9: Joystick**

1 **Joystick key**
2 **Swivel**
   Controls movements in the Z-axis
3 **Lower part**
   Controls movements in the X and Y-axis

**Fig. 3-10: Movement ranges of the joystick**

1 **Proportional range**
2 **Dynamic range**
3.5.1 Proportional range

In the proportional range, the capillary will move as quickly or slowly as the joystick is moved. The travel of the capillary is also proportional to the distance that the joystick has been moved forwards and backwards. The movement of the capillary will stop as soon as the joystick is no longer moved or when the position is reached at which the joystick was stopped. There is a noticeable stop on the outer limit of the proportional range. This stop is in a narrow zone in which moving the joystick sideways does not result in any further movement of the capillary.

The size of the proportional range depends on the working range selected.

3.5.2 Dynamic range

After the stop, the dynamic range of the joystick begins: When the joystick is moved against the spring-loaded stop, the capillary starts moving in the direction of the joystick movement. The movement stops when the joystick is released and it drops back into the zone due to the spring force of the stop. The speed of the capillary in the dynamic range is increased dynamically by a stronger pressure against the stop.

The size of the dynamic range is limited by the movement range of the modules (X and Y).

3.5.3 Direction of movement of the joystick

The joystick can be moved along the horizontal plane. This controls the motors of the X-module and the Y-module. The joystick can be moved in one axis at a time or in a combination of axes.

- Move the capillary in the horizontal direction (X and Y-axis).

Fig. 3-11: Movement in the X and Y-axis
3.5.4 Direction of movement of the rotating wheel

The rotating wheel on the joystick moves the motor module in the vertical axis. This activates the motor of the Z-module.

- Move the capillary in the vertical direction (Z-axis).

![Fig. 3-12: Movement in the Z-axis](image)

3.5.5 Joystick key functions

- Uncouple the joystick from the motor module.
- Trigger functions (e.g., switch between saved positions).

![Fig. 3-13: No movement of the capillary](image)

3.6 Working range

There are three working ranges within the movement range of the joystick. For each working range, a radius with a resulting speed ratio is preset. The radius can be set using the selection dial on the control board and in the Speed menu.

Working ranges:
- **coarse** – for a large working range
- **fine** – for a medium working range
- **x-fine** – for a small working range
Product description
TransferMan® 4r
English (EN)

Fig. 3-14: Large working range – coarse

- Move capillary over a large distance.
- Position capillary roughly and quickly.

Fig. 3-15: Medium working range – fine

- Move capillary over a medium distance.
- Position capillary precisely.

Fig. 3-16: Small working range – x-fine

- Move capillary over a very short distance.
- Position capillary very precisely and slowly.
- Active for x-fine working range larger than 0.
3.7 Resulting speed

In the inner (proportional) range, the speed of the capillary is dependent on the speed at which the joystick is moved forwards and backwards and the size of the set working range. If the joystick is moved forwards and backwards at the same speed with, e.g., the setting fine or coarse, the resulting speed with the smaller fine working range is less than with the larger coarse range.

The speed of the outer (dynamic) range is coupled to the selected working range. The coupling factor (Dyn-factor) can be changed and adjusted in the Installation menu. Since the speed results from the working range, the settings for Coarse fine and x-fine can be adjusted in the Speed menu.
4 Installation
4.1 Preparing installation

NOTICE! Damage to the control board as a result of incorrect handling.

- Grasp the control board on the housing.
- Do not lift the control board using the joystick.
- Never place the control board on the joystick.

Keep the packaging and the transport securing devices for later transport or storage.

Do not operate the device if there is visible damage to the device itself and/or to its packaging.

1. Check the packaging for damage.
2. Carefully remove the motor module and the control board from the packaging.
3. Check that everything is included in the delivery.
4. Check the modules, the control board and the accessories for damage.

4.1.1 If there is any damage, make a claim

- Contact customer service.

4.1.2 Delivery incomplete

- Contact customer service.

4.1.3 Microscope adapter assembly

The microscope adapter is not included in the scope of delivery and must be ordered separately.

- Assemble the microscope adapter in accordance with the assembly instructions for the microscope adapter.

4.2 Selecting the location

Select the device location according to the following criteria:

- Suitable mains/power connection in accordance with the name plate.
- A bench with a horizontal and even work surface which is designed to support the weight of the devices.
- A mat or table that is cushioned against vibrations.
- The location is protected from direct sunlight and drafts.

- The mains/power switch and cutting unit of the mains/power line must be easily accessible during operation (e.g., residual current circuit breaker).
4.3 Mounting overview

5  Screw
4.3.7 Angle head

The angle head is supplied ready for right side mounting. For left side mounting, the position of the knurled screw has to be changed and the holder for the capillary holder has to be turned accordingly.

Fig. 4-7: Angle head with inserted capillary holder 4

|| stands for right side mounting  
8 Lower joint

4.4 Mounting the motor module

The motor module can be mounted on the right-hand or left-hand side of the microscope adapter. The following describes mounting on the right-hand side. For mounting on the left-hand side, the swivel joint and the angle head must be modified.

- The motor module is mounted as standard on an inverse microscope. It can also be mounted on a universal stand. Mounting on a universal stand is described in the corresponding manual.
4.4.1 Mounting the Z-module – horizontal microscope adapter

Prerequisites
- Horizontally mounted microscope adapter
- Installation manual for the microscope adapter
- Allen torque screwdriver, 3 mm

1. Slide the Z-module holder onto the microscope adapter.

2. Push the fixed rail onto the Z-module holder until it reaches the stop angle and tighten the screw. The connecting cable must point to the rear.

3. Take the setting position for the Z-module holder from table column 1 (installation manual for the microscope adapter).

4. Slide the Z-module holder with the Z-module into its setting position and tighten the screw.
4.4.2 Mounting the Z-module – vertical microscope adapter

Prerequisites
- Vertically mounted microscope adapter
- Installation manual for the microscope adapter
- Allen torque screwdriver, 3 mm

1. Slide the Z-module onto the Z-slider and tighten the screw slightly.
2. Take the setting position for the Z-module from table column 1 (installation manual for the microscope adapter).
3. Slide the Z-module into its setting position and tighten the screw.

4.4.3 Mounting the Y-module

Prerequisites
- Installation manual for the microscope adapter
- Allen torque screwdriver, 3 mm

1. Undo the screw on the YZ connector.
2. Take the setting position from table column 3 (installation manual for the microscope adapter).
3. Set the position on the front edge of the YZ connector.
4. Tighten the screw on the YZ connector.
4.4.4 Mounting the X-module

Prerequisites
• Installation manual for the microscope adapter
• Allen torque screwdriver, 3 mm

WARNING! Danger due to strong magnetic field
Magnetic fields may affect pacemakers and defibrillators. Pacemakers may be reset.
› Keep a distance of at least 10 cm from the magnet.
› In particular, be sure to keep the safety distance during installation.

1. Push the swivel joint onto the fixed rail of the X-module.
   The eppendorf labeling must be readable.
2. Take the setting position from table column 6 (installation manual for the microscope adapter).
3. Set the position on the left edge of the swivel joint.
4. Tighten the screw on the swivel joint.

5. Take the setting position from table column 4 (installation manual for the microscope adapter).
6. Push the YZ connector with the Y-module onto the Z-module and hold it in position.
7. Set the position on the upper edge of the YZ connector.
8. Tighten the screw on the YZ connector.
4.4.5 Mounting the angle head

Prerequisites
- Installation manual for the microscope adapter
- Allen torque screwdriver, 3 mm

1. Push the angle head onto the X-module.
2. Take the setting position from table column 7 (installation manual for the microscope adapter).
3. Set the position on the right edge of the angle head.
4. Tighten the screw on the angle head.

5. Take the setting position from table column 5 (installation manual for the microscope adapter).
6. Push the swivel joint with the X-module onto the Y-module.
7. Set the position on the rear edge of the swivel joint.
8. Tighten the screw on the swivel joint.
4.5 Inserting o-rings in the grip head

Prerequisites
- The o-rings and the distancing sleeve are clean and free of damage.
- The grip head is clean and free of damage.
- A flat and clean surface is available.

1. Place the o-rings and the distancing sleeve on a flat surface.
2. Press the grip head vertically onto the first o-ring and push it into the grip head with the capillary holder.
3. Press the grip head vertically onto the distancing sleeve and push it into the grip head with the capillary holder.
4. Press the grip head vertically onto the second o-ring and push it into the grip head with the capillary holder.

4.6 Inserting the capillary holder into the angle head

Prerequisites
- Capillary holder 4 from Eppendorf is prepared.
- Capillary holder (diameter: 4 mm) from another manufacturer is prepared.
- The O-rings are inserted in the grip head.
4.6.1 Attaching the positioning aid

Prerequisites

- The positioning aid is prepared.
- The capillary holder is inserted in the angle head.

The positioning aid can be attached to the capillary holder to quickly clamp it in the same position.

1. Loosen the knurled screw on the angle head.
2. Insert the capillary holder into the clamp.
3. Align the capillary holder in such a way that the capillary tip is located approx. 20 mm above and approx. 20 mm from the outside of the operating point.

1. Place the positioning aid on the capillary holder and tighten.
2. Tighten the knurled screw.
4.7 Inserting the capillary

**WARNING! Risk of injury due to flying capillaries and glass splinters.**
If exposed to high pressures, capillaries may detach themselves from the grip heads and become projectiles. Capillaries can crack as a result of incorrect handling.

- Wear protective goggles.
- Never aim capillaries at people.
- Use capillaries with an outer diameter that matches the grip head specifications.
- Always mount / dismount capillaries when they are depressurized.
- Mount the capillary correctly in the grip head.
- Do not touch the capillary with the Petri dish or other objects.

**NOTICE! Mechanical damage to the motor modules.**
Excessive load leads to increment errors or destruction of the drive.

- Do not drive the modules against mechanical obstructions.
- Do not hold any objects near the modules.
- Load the motor module with a maximum of 200 g.

**Standard capillary:** Only use the grip head 4, size 0, with capillaries with an outer diameter of 1.0 mm to 1.1 mm. If you would like to use other capillaries, order the matching gear head.

Prerequisites
- The O-rings are inserted in the grip head.

1. Push the capillary into the grip head until it reaches the stop and tighten the grip head.
4.8  Inserting Femtotips

Prerequisites
• Capillary holder 4 is prepared.
• Adapter for Femtotips is prepared.

1. Remove the grip head.
2. Screw the adapter for Femtotips into the capillary holder.
3. Screw the Femtotip into the adapter and tighten.

4.9  Setting the injection angle

1. Turn the knurled screw to set the injection angle.

4.10  Aligning the motor module

To be able to use the full movement range of the modules, the modules should be aligned centrally.

The exact position values to adjust the modules to the microscope can be found in the installation instructions of the respective adapter for microscope.

4.12 Converting the swivel joint for left side mounting

Prerequisites
- 2 mm Allen key
- Right side mounting marks (||) are aligned above each other

**WARNING! Danger due to strong magnetic field**
Magnetic fields may affect pacemakers and defibrillators. Pacemakers may be reset.
- Keep a distance of at least 10 cm from the magnet.
- In particular, be sure to keep the safety distance during installation.

1. Rotate the lower joint until both Allen screws are accessible.

2. Unscrew the Allen screws.
3. Open the upper joint a little bit.
The magnets are not in contact with the stop plate.
The stop plate can be removed more easily.
4. Remove the stop plate.

5. Rotate the lower joint back.
6. Rotate the upper joint by 180°.
The sliders must be at a 90° angle to each other.
7. Align the left side mounting marks (I).
8. Fit the stop plate in such a way that the pins sit in the holes of the turntable.

9. Rotate the swivel joint by 180°.

10. Insert the Allen screws and tighten the stop plate. Left side mounting marks (I) are aligned above each other.
4.13 Converting the angle head for left side mounting

Prerequisites
- 1.3 mm Allen key.

1. Undo the set screw and pull the knurled screw off the spindle.

11. Check the position of the joints. The sliders must be at a 90° angle to each other. The eppendorf labeling must be readable.
4.14 Connect the motor module to the control board

**WARNING! Risk from incorrect voltage supply.**
- Only connect the device to voltage sources which correspond with the electrical requirements on the name plate.
- Only use sockets with protective earth conductor.
- Only use the mains/power cord supplied.

**NOTICE! Damage to the control board as a result of incorrect handling.**
- Grasp the control board on the housing.
- Do not lift the control board using the joystick.
- Never place the control board on the joystick.
NOTICE! Material damage from incorrect connections.
- Only electrical connections may be made to devices described in the operating manual.
- Other connections are permitted only with the agreement of Eppendorf AG.
- Only connect devices that meet the safety requirements defined in IEC 60950-1.

NOTICE! Short circuit caused by incorrect installation.
- Failure to observe the order of steps may result in a short circuit.

Prerequisites
- TransferMan 4r is switched off.
- The power cable is disconnected.

1. Connect the module (X,Y,Z) plug with the ports on the control board.
2. Tighten the fixing screws on the plug manually.
3. Connect the mains/power cord.
4. Switch on the mains switch.
5. Set the installation parameters. You can use the software wizard First set-up or the Installation menu to set the Side and Angle parameters.

4.15 Setting installation parameters
Installation parameters must be set:
- During first set-up
- After a reset

The following settings are defined:
- Mounting side of the motor module
- Center motors
- Adjust motors
- Set date
- Dynamic movement range of the joystick
4.15.1 First set-up wizard

Prerequisites
• The micromanipulator is switched on.
• The capillary holder is not installed.

1. Select the First set-up application.

2. Select the mounting side.
3. Select Next.

4. Select Next.
5. Select *Execute*. The X-motor and the Y-motor are moved to the middle position. The Z-motor is set to a 20/80 position.

6. Select *Next*.

7. Insert the capillary holder into the angle head.

8. Select *Next*.

9. Align the modules manually with an Allen key.

10. Select *Next*.

11. Remove the capillary holder.

12. Insert the capillary into the capillary holder.

13. Insert the capillary holder with the capillary into the angle head.

14. Finely adjust the position of the capillary holder and the modules. Align the capillary tip so that it is approximately in the focus of the microscope.

15. Select *Next*.
16. Set the time and the date.
17. Select Next.

18. Switch the dynamic movement range of the joystick on or off.
19. Select Next.

20. Select Enter.
The installation is complete and the modules are adjusted.
The application screen shows My application.
You can select an application or define it as the start screen.
4.16 Connecting an external device

The following devices can be connected to the control board:

- Eppendorf FemtoJet 4i
- Eppendorf PiezoXpert
- Computer

4.16.1 Connecting the FemtoJet 4i

Prerequisites

- Devices are switched off.

The operation is described in the manual for the FemtoJet 4i.

1. Connect the FemtoJet 4i to the port for external devices.
2. Switch on the FemtoJet 4i.
   The initialization phase starts.
3. Switch on the control board.
   After completion of the initialization phase, the status message *Injector ready* appears on the application screen.

4.16.2 Connecting the PiezoXpert

Prerequisites

- Devices are switched off.

The operation is described in the manual for the PiezoXpert.

1. Connect the PiezoXpert to the port for external devices.
2. Switch on the PiezoXpert.
   The initialization phase starts.
3. Switch on the control board.
   After completion of the initialization phase, the status message *PiezoXpert ready* appears on the application screen.
4.16.3 Connecting the Computer

Prerequisites
• A data cable is available.
• Devices are switched off.

Control with a computer is described in the Cell Technology · PC Control manual.

1. Connect the data cable to the port for external devices.
2. Connect the computer to the data cable.
3. Switch on the control board.

4.16.4 Connecting two devices

Prerequisites
• Y-connector is available.
• Devices are switched off.

Two devices can be connected with a Y-connector.

The following combinations are possible:
• Computer and FemtoJet 4i
• FemtoJet 4i and PiezoXpert

1. Connect the Y-connector to the port for external devices.
2. Connect the device combination.
3. Connect the devices.
   After initialization, status messages appear on the application screen.
5 Software
5.1 Display

The display shows current settings, e.g., the selected working range, the position of the motors and the defined limits.

</tbody>
</table>
5.4 Navigating the menu

Navigate the menu using the arrow keys. Pressing *Enter* will confirm the selection. You can switch between menus and submenus with the arrow keys to the left and to the right.

5.4.1 Entering or changing parameters

Parameters can be changed in the menu using the arrow keys, the selection dial or the rotating wheel on the joystick.

- Change values with the upwards or downwards arrow keys.
- Change values using the selection dial.
- Change values using the upper part of the joystick.
- Save with *Enter*.  

![Software navigation](image1)

![Changing the parameters](image2)
### 6 Operation

**WARNING! Electric shock due to damage to device or mains/power cord.**
- Only switch on the device if the device and the mains/power cord are undamaged.
- Only use devices that have been properly installed or repaired.
- In case of danger, disconnect the device from the mains supply. Disconnect the mains/power plug from the device or the earth/grounded socket. Use the isolating device intended for this purpose (e.g., the emergency switch in the laboratory).

**Do not move the joystick immediately after power-on. Wait until the initialization is completed. The completion of initialization is indicated by the display switching to the operating state.**

#### 6.1 Switching the device on or off

**6.1.1 Switching the device on**

1. Switch on the device at the mains/power switch.
   - The motor module and the control board are switched on.
   - The device runs through an initialization phase.
   - The application screen appears.

**6.1.2 Switching off the device**

1. Switch off the device at the mains/power switch.
   - The motor module and the control board are deenergized.

#### 6.2 Activating or deactivating the control board

**6.2.1 Activating the control board**

Prerequisites
- The display shows **STANDBY**.

1. Press the **standby** key.
   - The keys, joystick, selection dial, and softkeys are activated.
   - The display shows the application screen.

**6.2.2 Deactivating the control board**

The step motors slowly move to the next parking position. This prevents the motors falling back to the parking position and the capillary jumping.

1. Press the **standby** key.
   - The keys, joystick, selection dial are deactivated.
   - The display shows **STANDBY**.
   - Current movements are stopped.
   - The motor module remains switched on so that the step motors keep their current position.
6.3 Defining the start screen
An application can be selected as the default application. The micromanipulator then starts with the defined application. The application screen with all the applications can be redefined in the Start display menu.

6.3.1 Defining the application
1. Press and hold the softkey of the desired application for 3 seconds.
   The micromanipulator always starts with the defined application.

6.3.2 Defining the selected application
1. In the Change appl menu, select the Start display submenu.
2. Select Execute.
3. Confirm with Enter.
   The micromanipulator starts with the selected application.

6.4 Replacing the capillary
Prerequisites
- The capillary is depressurized.

**WARNING! Risk of injury due to flying capillaries and glass splinters.**
If exposed to high pressures, capillaries may detach themselves from the grip heads and become projectiles.
Capillaries can crack as a result of incorrect handling.
- Wear protective goggles.
- Never aim capillaries at people.
- Use capillaries with an outer diameter that matches the grip head specifications.
- Always mount / dismount capillaries when they are depressurized.
- Mount the capillary correctly in the grip head.
- Do not touch the capillary with the Petri dish or other objects.

**CAUTION! Risk of injury from capillaries**
Capillaries can easily penetrate your skin.
- After changing a capillary, swivel it immediately back to the working range.

**CAUTION! Risk of crushing between the modules**
The modules automatically move in all spatial axes.
- Do not reach into the movement range of the modules.
6.4.1 Manually positioning the capillary

- Suitable when using capillaries of different lengths (e.g., self-pulled capillary).

1. Press the Back manual key.
2. Manually position the capillary in the working range.

6.4.2 Automatically positioning the capillary

- Suitable for industrial capillaries of exactly the same length.

1. Press the home key.
   - The capillary automatically moves back into the working range.

6.5 Changing the sample

**CAUTION!** Risk of crushing between the modules
- The modules automatically move in all spatial axes.
  - Do not reach into the movement range of the modules.
6.6 Changing the size of the working range

6.6.1 Change parameters using the selection dial

1. Press the *home* key to move the capillary out of the working range.
2. Swing the X-module backwards.
3. Change the sample.
4. Swing the X-module back.
5. Press the *home* key to move the capillary back into the working range.

1. Press the key for the required working range on the control panel.
2. Turn the selection dial to change the value of the working range.

6.6.2 Changing parameters in the menu

Prerequisites
- An application has been selected.

<table>
<thead>
<tr>
<th>Menu / Speed</th>
<th>6000 µm</th>
<th>250 µm</th>
<th>0 µm</th>
<th>300 µm/s</th>

<tr>
<td>Home speed</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

1. Press the *menu* key.
2. Select the *Speed* menu.
3. Select the desired parameter.
4. Change the value.
6.7  Shifting the movement range of the capillary
6.7.1  Extending the movement range into the dynamic range
When the movement range of the capillary is not sufficient, the joystick can be moved into
the dynamic range. By doing that you can move the capillary further into the required
direction.
1. Move the joystick into the dynamic range.
2. Keep the joystick in the dynamic range until the capillary has reached the desired
   position.
   The further you move the joystick forwards or backwards, the faster the capillary will
   move.

6.7.2  Uncoupling and resetting the joystick
When the current movement range of the capillary is not in the correct position, the
joystick movement can be uncoupled from the capillary movement. By doing that you can
reset the joystick and move the capillary further into the required direction.

6.8  Capillary positions
To secure the capillary when moving a slide and to move it back to the same work position
you can store the coordinates. Actually, not the position of the capillary tip, but the
coordinates of the motor module are stored. The default function stores the coordinates
for the duration of the work session. If the micromanipulator is switched off, the stored
data, positions, and coordinates will be deleted. To keep the stored data after the work
session has ended, you can use the advanced storage function.
Storage functions:
• Default storage function – coordinates will be deleted after switching off the device.
• Advanced storage function – coordinates will be kept after switching off the device.
6.8.1 Saving a position

Prerequisites
- An application has been selected.

Depending on the application, a maximum of five positions can be stored.

1. Move the capillary to the desired position.
2. Hold the Pos 1 softkey for approx. one second to store the working position of the capillary.
   An acoustic signal sounds.
   Pos 1 is marked.
   The coordinates are displayed.
   The stored position is displayed in the status field.

3. Move the capillary to the desired position (e.g., parking position).
4. Press and hold the Pos 2 softkey for approx. one second to store the parking position of the capillary.
   An acoustic signal sounds.
   Pos 2 is marked.
   The stored position is displayed in the status field.

As soon as the capillary leaves a stored position, the filled circle is displayed as an empty circle to show that this position has been stored. If no positions are stored, the status field will be empty.

6.8.2 Moving to the position using the softkey

Prerequisites
- At least one position is stored.

1. Press a softkey with a stored position.
   You will move to the selected position.
   The joystick is deactivated until the position has been reached.
   The LEDs flash.
   In the softkey status field a filled circle is displayed.

   If a stored position is lower than the lower limit (Z-axis Limit), the position on the Z-axis will only be approached up to the defined limit.
6.8.3 Moving to the position using the joystick key

Prerequisites
- At least one position is stored.
- The Joystick key parameter must be set to the Switch position value.

- Press the joystick key twice.
  You will move to the first position.

- Press the joystick key twice.
  You will move to the next position.

6.8.4 Overwriting a stored position

Prerequisites
- A position is stored.

1. Press the softkey for a different position.
   You will move to the position.

2. When the position has been reached, press and hold the softkey for the position to be overwritten.
   The old position is overwritten with the current coordinates.

3. Press the softkey.
   An acoustic signal sounds.
   In the softkey status field a filled circle is displayed.
   The stored position is displayed in the coordinate field.

6.8.5 Deleting a stored position

Prerequisites
- A position is stored.

1. When the position has been reached, hold the softkey.
   An acoustic signal sounds.
   The position has been deleted.
   The status field is empty.
6.9 Using the advanced storage function

The following data is stored:
- the current coordinates of the motor module.
- the data of the Pos 1 to Pos 5 softkeys.
- the defined vertical (Z-axis Limit and Upper limit) or horizontal (X-axis Limit) limits.

Prerequisites
- An application has been defined as the default application.
- At least one position or limit has been defined.

1. Press the standby key.
   The specified data of the work session will be stored.
   The current coordinates of the motor module will be stored.
   For technical reasons, the motors will still move a few micrometers after this to get into a defined end position.
   The micromanipulator can be switched off at the mains/power switch.
   The data will be available when the micromanipulator is started the next time.

6.10 Vertical limits

For the Z-axis, a lower and upper limit can be defined. This prevents the capillary coming into contact with the bottom of the Petri dish or moving against the condenser of the microscope adapter.

- Lower limit – Z-axis Limit
- Upper limit – Upper limit

6.10.1 Defining the lower limit

Prerequisites
- An application has been selected.

1. Position the capillary a little way above the slide.
   The Z-coordinate is marked with L.
   The value for the limit (Limit Z) is displayed.
   Z-axis Limit is selected.
   The capillary cannot be moved any lower.

6.10.2 Deleting the lower limit

1. Press Z-axis Limit.
   The limit is deleted.
6.10.3 Defining the upper limit

1. In the Installation menu, select the Upper limit submenu.
   The Upper Limit window appears.
2. Move the capillary to the top position.
3. Save the position with Set.
   The Z-coordinate is marked with U.
   The value for the limit \((\text{Lim})\) is displayed.
   The capillary cannot be moved any higher.

6.10.4 Deleting the upper limit

1. In the Installation menu, select the Upper limit submenu.
   The Upper Limit window appears.
2. Save the position with Clear.
   The limit is deleted.

6.11 Horizontal limit

For the X-axis, a limit can be defined for a horizontal injection. This prevents the capillary from moving through the sample.

1. In the Installation menu, select the Angle submenu.
   The application screen now displays X-axis Limit.
2. Set the injection angle to 0° and save with Enter.
3. Close the menu.
   The X-coordinate is marked with L.
   The value for the limit \((\text{Limit X})\) is displayed.
   The capillary cannot be moved any further to the side.
6.11.2 Deleting the horizontal limit

1. Press \textit{X-axis Limit}.
   The limit is deactivated.
2. In the \textit{Installation} menu, select the \textit{Angle} submenu.
3. Reset the injection angle to the operating angle and save with \textit{Enter}.
   The lateral limit is deleted.
   The application screen displays \textit{Back} again.

6.12 \textit{Speed} function

In the \textit{Speed} menu you can set the size of the working range and the speed at which certain positions are approached or movements executed.

6.12.1 \textit{Speed} menu and parameters

\begin{tabular}{|l|c|c|c|}
\hline
\textbf{Parameter} & \textbf{Value} & \textbf{Range of values} & \textbf{Increment} & \textbf{Standard} \\
\hline
\textit{Coarse} & Set size in \textit{μm} & 5 – 12500 & 5 & 6000 \\
\textit{Fine} & Set size in \textit{μm} & 5 – 2000 & 5 & 250 \\
\textit{X-fine} & Set size in \textit{μm} & 0 – 600 & 1 & 80 \\
\textit{Step inj. speed} & Set speed in \textit{μm per second} & 5 – 10000 & 5 & 300 \\
\textit{Position speed} & Set speed in \textit{μm per second} & 5 – 10000 & 5 & 1500 \\
\textit{Home speed} & Set speed in \textit{μm per second} & 5 – 10000 & 5 & 7500 \\
\hline
\end{tabular}

If a value of 0 is set for the parameter \textit{X-fine}, then the option of changing between the \textit{Fine} and \textit{X-fine} working ranges is deactivated.

1. Select the desired parameter.
2. Set the value for the parameter.
3. Close the menu.
6.13  **Step injection function**

With this function you can execute a straight injection over a defined distance. *Step injection* can be executed with the foot control or with a connected FemtoJet 4i.

6.13.1  **Step injection menu and parameters**

![Menu – Step injection](image)

6.13.2 Executing the *Step injection* function

**Prerequisites**
- A FemtoJet 4i is connected.
- *Step injection* is assigned to a free softkey.

1. Activate *Step injection*.
2. Set *Step inj. dist*.
3. Set the injection time on the FemtoJet 4i.
4. Select *Step inj. dist*.
5. Close the menu.
   The application screen displays *Step injection*.
6. Trigger the injection by selecting *Inject* on the FemtoJet 4i.
   The function is executed.

6.14 *Home* function

The *Home* function quickly moves the capillary out of the work area and is suitable for a quick change of capillary.

6.14.1 *Home* menu and parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Range of values</th>
<th>Increment</th>

<td>Set vertical offset in μm</td>
<td>5 – 20000</td>
<td>5</td>
<td>0</td>
</tr>
</tbody>
</table>

6.14.2 Setting the parameter for *Home*

1. Set the speed.
2. Set the offset.
3. Close the menu.
6.14.3 **Move the capillary out with the *home* key**

**Prerequisites**
- The parameters in the *Home* menu have been defined.

---

**CAUTION! Risk of crushing between the modules**
The modules automatically move in all spatial axes.
- Do not reach into the movement range of the modules.

### coarse

<table>
<thead>

<td></td>
<td></td>
</tr>
</tbody>
</table>

Offset = 0 μm

▲ ▼ Back manual

1. Press the *home* key.
   - The *home* function is terminated.
   - The capillary is moved out of the work area.
   - The *home* key lights up.

---

6.14.4 **Move the capillary back with the *home* key**

---

**CAUTION! Risk of crushing between the modules**
The modules automatically move in all spatial axes.
- Do not reach into the movement range of the modules.

1. Press the *home* key.
   - The *home* function is terminated.
   - The capillary is moved back into the work area.

---

6.14.5 **Setting the offset.**

For capillaries of different lengths, an offset can be set. This defines a limit for the *home* function.

---

### coarse

<table>
<thead>
<tr>
<th>HOME</th>
<th>X</th>

Offset = 0 μm

▲ ▼ Back manual

1. Change the offset using the arrow keys.
   - The value for the offset is displayed in the status field.
6.14.6 Terminate the home function.

1. Press Back manual. The home function is terminated.
2. Move the capillary manually using the joystick.

6.15 Clean function

With this function you can move the capillary over a defined distance out of the medium. In the process, outside contamination is removed from the capillary at the medium boundary.

6.15.1 Clean menu and parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Range of values</th>

</tbody>
</table>
6.15.2 Setting the parameter for Clean

Set the *Clean distance* above the medium boundary

1. Set *Home speed*.
2. Set *Clean distance*.
3. Close the menu.

6.15.3 Execute the *Clean* function

**Prerequisites**
- Parameters are set for *Clean*.
- *Clean* is assigned to a softkey.

1. Press *Clean*.
   The screen for *Clean* appears.
2. Execute the function with *Clean*.
   The capillary is moved out of the medium with the set parameters.

6.15.4 Terminate the *Clean* function.

1. Press *Back manual*.
   The function is terminated.
   The application screen appears.
6.16  PiezoXpert function

<tr>
<td>User default</td>
<td>Reset the settings to the delivery status</td>
<td>Execute</td>
</tr>
</tbody>
</table>

**Fig. 6-7: Menu – Function**

#### 6.18.2 Executing Zero coordin

1. Select the parameters and confirm with *Enter*.
2. Confirm *Execute* with *Enter*.
   - All coordinates are reset to zero.
   - Saved positions are deleted.
   - Set limits are deleted.

#### 6.18.3 Executing Center motors

**Prerequisites**
- No capillary holder is clamped.

---

**CAUTION! Risk of crushing between the modules**

The modules automatically move in all spatial axes.

- Do not reach into the movement range of the modules.
1. Select the parameters and confirm with Enter.
2. Confirm Execute with Enter.
   X-motor and Y-motor are moved to the middle position.
   Z-motor is moved to a 20/80 position.
   All coordinates are reset to zero.
   Saved positions are deleted.
   Set limits are deleted.

### 6.18.4 Executing User default

1. Select the parameters and confirm with Enter.
2. Confirm Execute with Enter.
   All parameters are reset to the factory settings.
   The application screen appears.

### 6.19 Softkeys function

With this function you can assign programs to free softkeys. Assigned softkeys are indicated with a lock symbol.

#### 6.19.1 Softkeys menu and parameters

![Menu - Softkeys](image)

**Parameter** | **Value** | **Range of values**
---|---|---

<td>Switch fine</td>
<td></td>
<td>Double-click to go to the fine or x-fine working range</td>
</tr>
</tbody>
</table>
6.19.2 Execute Softkeys

1. Select the free softkey and confirm with Enter.
2. Select the desired parameter and confirm with Enter.
3. Close the menu.
   - The selected parameter is assigned to the free softkey.
   - The parameter appears on the application screen.

6.19.3 Execute Joystick key

Prerequisites
- The My application application has been selected.

1. Select Joystick key and confirm with Enter.
2. Select the desired function and confirm with Enter.
3. Close the menu.
   - The function is assigned to the joystick key.
   - The selected function appears on the application screen.

6.20 Change appl function

With this function you can define each application as the start screen or reactivate the default screen.

6.20.1 Change appl menu and parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Range of values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Start display</td>
<td>Reactivate start screen to select an application</td>
<td>Execute</td>
</tr>
<tr>
<td>Application</td>
<td>Define the selected application as the start screen</td>
<td>Cell transfer ICSI DNA injection Basic My application</td>
</tr>
</tbody>
</table>
6.20.2 Defining the application selection as the start screen

1. Select Start display.
2. Confirm with Execute.
3. Close the menu.

The micromanipulator starts with the selected application.

6.20.3 Defining an application as the start screen

1. Select an application.
2. Confirm with Enter.
3. Close the menu.

The micromanipulator always starts with the defined application.

6.21 Service function

6.21.1 Service menu and parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Range of values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selftest</td>
<td>Move the motor module in all three axes and output error message</td>
<td>EXECUTE</td>
</tr>
<tr>
<td>Device info</td>
<td>Display the software version</td>
<td>EXECUTE</td>
</tr>
<tr>
<td>Set clock</td>
<td>Set date and time</td>
<td>YYYY-MM-DD 00:00</td>
</tr>
<tr>
<td>Movements</td>
<td>Show movement routes of the modules (X, Y, Z)</td>
<td>EXECUTE</td>
</tr>
<tr>
<td>Show errors</td>
<td>Display the last 10 error messages</td>
<td>EXECUTE</td>
</tr>
<tr>
<td>Demo run</td>
<td>Save the position and move to it</td>
<td>EXECUTE</td>
</tr>
</tbody>
</table>

Fig. 6-10: Service menu
6.21.2 Executing the **Selftest** function

**CAUTION! Risk of crushing between the modules**
The modules automatically move in all spatial axes.
- Do not reach into the movement range of the modules.

1. Select **Selftest** and confirm with **Enter**.
2. Confirm **Execute** with **Enter**.
   The screen for the **Selftest** function appears.
3. Execute **Selftest** with **Start**.
   The motors move up to the limit stops.
4. Terminate **Selftest** with **Stop**.

6.22 Resetting parameters to the factory settings

6.22.1 Perform reset

Reset all parameters to the factory settings.

1. Keep the **home** key pressed.
2. Switch on the device at the mains power switch.
   The screen for **GENERAL RESET** appears.
3. Execute the function with **Yes**.
   All parameters are now reset to the factory settings.

6.22.2 Carrying out a reset in the menu

**Prerequisites**
- An application has been selected.

1. Press the **menu** key.
2. Select the **Function** menu.
3. Press **Enter**.
4. Select **User default** and confirm with **Execute**.
   All parameters are now reset to the factory settings.

6.23 Remote computer control of the TransferMan 4r

You can control the TransferMan 4r by means of a terminal program remotely via computer. Computer control by means of a terminal program is only recommended for certain applications and is not described in this operating manual. A special operating manual for this functionality is available at the following Internet address: [www.eppendorf.com](http://www.eppendorf.com).

**CAUTION!** Eppendorf does not provide any support for controlling the TransferMan 4r by means of a terminal program.
### 7 Troubleshooting

#### 7.1 General errors

**7.1.1 Motor module**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
</table>
| Motor axes move in the wrong direction or do not match joystick movement. | • Motor module mounted incorrectly.  
• Incorrect installation parameters entered.  
• Direction of movement of axis inverted. | ▶ Compare the installation parameters with the structure of the motor module.  
▶ Check the orientation and structure of the modules.  
▶ Check the connections of the modules at the control board.  
▶ Cancel the inversion of the axis. |

**7.1.2 Capillary**

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Capillary moves too fast or too slow.</td>
<td>• Radius of working range incorrectly set.</td>
<td>▶ Set the radius with the selection dial or in the Speed menu.</td>
</tr>
<tr>
<td></td>
<td>• Incorrect acceleration factor.</td>
<td>▶ In the Installation menu, set the value for the Dyn-factor parameter.</td>
</tr>
<tr>
<td>Capillary only moves to the side or vertically.</td>
<td>• Y-axis is disabled.</td>
<td>▶ The Y off function disabled.</td>
</tr>
</tbody>
</table>
| Capillary does not move down far enough.           | • The Z-axis Limit function is active.  
• Capillary is incorrectly adjusted.               | ▶ Deactivate the Z-axis Limit function.  
▶ Readjust the capillary.                          |
## 7.1.3 Control board and display

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device does not respond to keystroke when <em>Home</em> function is active.</td>
<td>•  function is active.</td>
<td>➤ Press the <em>home</em> key again. The capillary moves down.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>➤ Press the <em>Back manual</em> softkey.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>➤ Move the joystick.</td>
</tr>
<tr>
<td>The display does not show anything or the device cannot be activated although the device is connected.</td>
<td>•  The power cable or power plug is loose.</td>
<td>➤ Check the power cable or the power plug.</td>
</tr>
<tr>
<td></td>
<td>•  The device is switched off.</td>
<td>➤ Switch on the device.</td>
</tr>
</tbody>
</table>

## 7.1.4 Joystick

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Outer movement range of the joystick does not work.</td>
<td>•  Outer movement range is deactivated.</td>
<td>➤ In the <em>Installation</em> menu, set the value for <em>Dyn-mode</em> to <em>ON</em>.</td>
</tr>
</tbody>
</table>

## 7.1.5 Software and parameters

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parameters are not accessible for certain operations.</td>
<td>–</td>
<td>➤ Enter parameters again.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>➤ Carry out a reset and reset all parameters to the works settings.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>➤ Readjust device.</td>
</tr>
</tbody>
</table>

</table>
8 Maintenance
8.1 Replacing fuses

**DANGER! Electric shock.**
- Switch off the device and disconnect the mains/power plug before starting maintenance or cleaning work.

The fuse holder is located between the mains connection socket and the mains power switch. The fuses may only be replaced with the same type of fuse.

1. Disconnect the mains plug.
2. Pull the fuse holder out completely.
3. Replace the defective fuse.
4. Insert the fuse holder.

8.2 Cleaning

**DANGER! Electric shock as a result of penetration of liquid.**
- Switch off the device and disconnect the power plug before starting cleaning or disinfection work.
- Do not allow any liquids to penetrate the inside of the housing.
- Do not spray clean/spray disinfect the housing.
- Only plug the device back in if it is completely dry, both inside and outside.

**NOTICE! Damage from the use of aggressive chemicals.**
- Do not use any aggressive chemicals on the device or its accessories, such as strong and weak bases, strong acids, acetone, formaldehyde, halogenated hydrocarbons or phenol.
- If the device has been contaminated by aggressive chemicals, immediately clean it by means of a mild cleaning agent.

- Clean the device at least every 4 weeks.

1. Wipe the painted parts and the aluminum surfaces with a cloth and mild detergent.
2. Polish with a dry cloth.
8.3 Disinfection/decontamination

- Select disinfection methods that comply with the legal regulations and guidelines for your area of application.
- If you have any questions regarding cleaning, disinfection and decontamination, please contact Eppendorf AG.

Prerequisites
- All device parts are cleaned.
- A disinfectant containing alcohol (such as isopropanol or spirit) is available.
- Wipe all parts of the device with a cloth and the disinfectant.

8.4 Service and maintenance

Application-specific service and safety inspections are not required.

- Software updates may only be performed by authorized service personnel.

The Eppendorf AG service team is available to service and certify your device.

Service provisions:
- Service
- Operational qualification (OQ) according to manufacturer's specifications
- Electrical safety testing according to country-specific regulations
- Software update

Information on the services offered can be found on our webpage: www.eppendorf.com/epservices.

10 Transport, storage and disposal
10.1 Disassembling and packing the micromanipulator

Fig. 10-1: Base padding
9 Control panel
10 Power cable
11 Connecting cable

Fig. 10-2: Middle padding
3 Z-module
4 Y-module with YZ connector
5 Swivel joint
6 X-module
7 Angle head
8 Cable sheathing
Prerequisites

• The original box with foam padding is available.

1. Center the Z-module, X-module and Y-module manually with the joystick. The module housing and the movable rail must be flush.

2. Switch off the micromanipulator at the mains/power switch.

3. Pull the power cable and place it in recess 10.

4. Unscrew the module plug connections from the control board.

5. Unscrew the connection to the external device and place it in recess 11.

6. Place the control board in recess 09.

7. Align the joystick so that it is straight and position the middle padding with the recess above the joystick.

8. Remove the cable sheathing and place it in recess 08.

9. Remove the capillary holder.

10. Loosen and pull off the angle head.

11. Re-tighten the screws at the angle head and place them in recess 07.

12. Undo the screw on the swivel joint.

13. Pull off the X-module with swivel joint.

14. Loosen the second screw at the swivel joint and pull the swivel joint from the X-module.

15. Tighten both screws at the swivel joint and place the swivel joint in recess 05.

16. Place the X-module in recess 06.

17. Loosen the screw connecting the YZ connector to the Z-module.
18. Pull off the YZ connector with Y-module.  
   The YZ connector remains at the Y-module.

19. Tighten the screws at the YZ connector.

20. Place the Y-module with YZ connector in recess 04.

21. Loosen the screw connecting the Z-module holder to the Z-module and pull off the  
   Z-module.

22. Tighten the screw of the Z-module holder.

23. Place the Z-module in recess 03.

24. Insert the lid padding.

25. Place the tool bag in recess 02.

26. Close the box and send it to the authorized service.

### 10.2 Storage

<table>
<thead>
<tr>
<th></th>
<th>Air temperature</th>
<th>Relative humidity</th>
<th>Atmospheric pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>In transport</td>
<td>-25 °C – 55 °C</td>
<td>10 % – 95 %</td>
<td>70 kPa – 106 kPa</td>
</tr>
<tr>
<td>packaging</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Without transport</td>
<td>-5 °C – 45 °C</td>
<td>10 % – 95 %</td>
<td>70 kPa – 106 kPa</td>
</tr>
<tr>
<td>packaging</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### 10.3 Decontamination before shipment

If you are shipping the device to the authorized Technical Service for repairs or to your  
authorized dealer for disposal please note the following:

**WARNING! Risk to health from contaminated device.**

1. Observe the information on the decontamination certificate. You can find it as  
a PDF document on our webpage (www.eppendorf.com/decontamination).

2. Decontaminate all the parts you would like to dispatch.

3. Include the fully completed decontamination certificate in the package.
10.4 Transport

NOTICE! Damage to the control board as a result of incorrect handling.

- Grasp the control board on the housing.
- Do not lift the control board using the joystick.
- Never place the control board on the joystick.

<table>
<thead>
<tr>
<th></th>
<th>Air temperature</th>
<th>Relative humidity</th>
<th>Atmospheric pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>General transport</td>
<td>-25 °C – 60 °C</td>
<td>10 % – 95 %</td>
<td>30 kPa – 106 kPa</td>
</tr>
<tr>
<td>Air freight</td>
<td>-40 °C – 55 °C</td>
<td>10 % – 95 %</td>
<td>30 kPa – 106 kPa</td>
</tr>
</tbody>
</table>

Carry out the following steps before transport:
1. Move modules into center position.
   The movable rail must not protrude over the module.
2. Dismantle the module unit before transport.
3. Only use original packaging for transport.

10.5 Disposal

If the product needs to be disposed of, the relevant legal regulations must be observed.

Information on the disposal of electrical and electronic devices in the European Community:

Within the European Community, the disposal of electrical devices is regulated by national regulations based on EU Directive 2012/19/EU pertaining to waste electrical and electronic equipment (WEEE).

According to these regulations, any devices supplied after August 13, 2005, in the business-to-business sphere, to which this product is assigned, may no longer be disposed of in municipal or domestic waste. To document this, they have been marked with the following marking:

Because disposal regulations may differ from one country to another within the EU, please contact your supplier if necessary.

Declaration of Conformity

The product named below fulfills the requirements of directives and standards listed. In the case of unauthorized modifications to the product or an unintended use this declaration becomes invalid. This declaration of conformity is issued under the sole responsibility of the manufacturer.

Product name:
Eppendorf TransferMan® 4r

Product type:
Electric motor driven micromanipulator

Relevant directives / standards:
2014/35/EU: EN 61010-1, EN 61010-2-081
UL 61010-1, UL 61010-2-081
CAN/CSA C22.2 No. 61010-1, CAN/CSA C22.2 No. 61010-2-081
2014/30/EU: EN 61326-1, EN 55011
2011/65/EU: EN 50581
